IT, System Integration, Internet

- System Integration, Technological and Business Processes Automation, IT Consulting

Lead Analyst (Business/Systems)

domain analysis and modeling;

information systems design (including database structure, UI/UX, classes);

decisions coordination with the system architect;

SRS development (specification, acceptance criteria & etc.);

maintenance of developed SRS (directly with programmers);

implementation of the developed product;

product support at the initial stages of operation;

project documentation development/coordination/completion;

testing;

employees training;

*Achievements: an integration node has been designed, developed and implemented (24/7).

CNIEISU, Moscow, www.cnieisu.ru

IT, System Integration, Internet

- Software Development
- System Integration, Technological and Business Processes Automation, IT Consulting

Business Analyst -> Head of business analysis group/department -> Head of the Expert and Methodological Department

analysis and modeling of business processes using CASE tools (ERWIN, BPWIN, IBM System Architect);

development of an infological model of the subject area;

interviewing experts;

requirements management (IBM Rational DOORS);

development and coordination of technical and software documentation (using all the necessary standards);

consulting developers on business logic;

functional application testing;

organization of the work of a group/department of analysts

organization of joint work of counterparty enterprises in the line of responsibility;

direct interaction with the functional and administrative customer;

implementation of developed software products;

demonstration of developments to the customer in key scenarios;

requirements management;

implementation of software tools;

*Achievements:

successful completion of all stages (lifecycle) of product creation.

About me

Married, son of 6 years. Hobbies: sports, music.

Brief excerpts from work experience:

- designed a database (MS SQL, PostgreSQL)
- developed a dashboard based on data from IBM IMS (development of a hierarchical structure, algorithms (COBOL) for collecting required indicators and an API for integration with a C# application)
- included SQL scripts in SRS to generate an interconnected database structure (including view for data storefronts and separate GUIs)
- developed SQL migration scripts as the software was finalized (using Liquibase);
- developed a role model and the necessary SQL scripts;
- simple data mining at the stages of implementation and maintenance of software in the analysis of incidents;
- designed the subsystem of external interaction with my internal data exchange format;
- I used to perform tasks for the portfolio on <https://www.sql-ex.ru> (Nickname: apanasov);
- knowledge of the basics of data warehouses;
- knowledge of the basics of BigData technologies and the Hadoop ecosystem (HDFS, Hive, Impala, HBase), understanding of the MapReduce paradigm;
- knowledge of the basics of algorithmization and understanding of Java/Python code
