August 2013 — September 2018 - Platform Engineer

## Образование

- **Engener Automatisation**

Moscow State University of Instrument Engineering and Informatics  
2008

## Обо мне

Hello, I have 15th years experience in java development exclude education.

My current position is Tech Lead.I know how to build software with different architecture like microservices and monolith.I know how and when use practice like serverless stateless and statefull.Know enterprise and design patterns.I'm not affraid to take responsibilities and do my job before deadline.In my practice there is a place for TDD DRY and other good principles. I know how to biuld a presentation for knowlage sharing, can speak with clients, be level3 support or tack with customers for translate theys wishes into technical tasks.

Im' looking for position where I can start new carreer as developer because at the first time is hard to lead a team with different mentality and of course differente rules inside the company.In my Mind if you offer me you got fast growing up good professional who love his work.
