Обо мне

I am quite interested in Maths and Computer Science. I've attended city Math Olympiads during high school and always scored top 3 and also scored top 3 at Karagandy region Math Olympiad. In my spare time I indulge in exotic culinary traditions, wander around the city or play teamplay-based and economic simulator games. I like reading articles regarding environment, medicine, statistics, product development.

I can say that I am more of an explorer, seeker of new experiences. Often I can't resist allure of novelties around me. New challenges keep me motivated for showing initiative and acquiring higher achievements. At the same time, I see benefit in reliably working systems and sustainable development. That's why, professionally, I'm mostly interested in optimization, automatization and intensive economic growth rather than extensive. Quality, speed and forethought are essential principles in any initiative.

My github:

<https://github.com/hipotalamusgit/testtasks>

There I store some interesting test tasks from job interviews

I have experience of more than 2 years as a Product Analyst in web and mobile B2C. I have more than 4 years practicing data analysis using SQL, Tableau, Python(numpy, pandas, matplotlib, etc), Mixpanel, Appmetrica and others.

I have experience working in a digital health app product team as well.

After onboarding I always adhere a self-driven approach
