Обо мне

Currently working as a backend developer at VK Search Team. Developed each level of the search services — search engine, backend, quite a bit of frontend and product analytics.

Now learn how blockchain and cryptocurrencies in general are working. Passed a few courses related to blockchain, smart contracts, hack and audit smart contracts, and recently began to learn to practice part of this direction, solve the problems at Ethernaut and similar platforms, learn how to develop, deploy, audit and hack contracts and write code in Solidity.

Was practicing in the directions of ML such as deep learning, GAN and neural networks.
