Навыки

Api test automation, C#, Docker, Git, Java, Jmeter, JUnit, Kotlin, Linux, Load Testing, nUnit, Octopus Deploy, Postman, Prometheus, ProxmoxVE, QA team management, Quality assurance process management, RestSharp, Selenide, Selenium, TeamCity, test design, VMware Sphere.

Опыт работы

- **AliExpress CIS**

  February 2023 — till now - Lead tester

  I act as a lead tester and perform the following functions: – Development of auto-tests for testing the application API (python3, pytest, allure, request)
  – Managing the testing process in a team
  – Planning and control of testing work
  – Estimation of labor costs
  – Communication with senior management and related development teams on various issues
  – Participation in onboarding of new employees
  – Assessment and control of the test domain
  – Control and maintenance of test documentation
  – Participation in events to support "Zero

- **Sibur Digital, JSC**

  March 2022 — February 2023 - Automation Test Engineer

  – Development of UI autotests (Kotlin, Gitlab, Gradle, Allure, Selenium, JUnit, AssertJ, Spring Data JPA)
  – Maintaining test documentation (Allure TMS, Jira)
  – Work according to Scrum methodology

- **Infotecs, JSC**

  February 2017 — March 2022 - Automation Test Engineer / QA Lead

  Managing the testing process on a project and a testing team consisting of three testers (manual)
  Namely: – Planning, distribution and control of testing work
  – Communication with senior management and related development teams on various issues
  – Providing reports to interested parties
  – Mentoring, description of various guides, "best practice"
  – Participation in interviewing candidates for the role of tester
  – Assessing and monitoring the coverage of functionality (requirements) by tests
  – Estimation of labor costs
  – Control and maintenance of test documentation: test plans, checklists, testing reports
  – Review of business and functional requirements
  – Working according to Agile

– Development of autotests for REST API applications (C#/net5.0, Nunit3, RestSharp) support of existingAPI tests (postman +newman)
– Writing autotests to automate web-UI checks (SeleniumSelenide, Java, Junit, Maven)
– Writing load testing scripts and performing load testing (Jmeter, Grafana, Prometheus)
– Setting up CI/CD builds and test environments (Teamcity, Octopus Deploy, ProxmoxVE, VMWare vSphere, Workstation, Docker)
In general, I conducted testing on projects for the development of web server applications on microserviceand monolithic architecture, as well as on a project to develop an agent application for collecting telemetry

- **DSSL, JSC**

Engineer / System Administrator - June 2016 — February 2017

Administration of local network and company servers in local office. Ensuring trouble-free operation of the office. Technical and service support for the company's clients. Assembly/firmware of video servers. firmware for IP video cameras (Hikvision, HiWatch, ActiveCam, Trassir, Lanser). Diagnostics/modular repair of camera servers, less often component repair-soldering. Installation and configuration of ACS (Sphinx), video surveillance systems Hikvision (HiWatch), Dssl
(ActiveCam, Trassir, Lanser), Microdigital. Solving problems that arise for clients with video servers, video surveillance cameras and Trassir software/assistance in setting up. Calculation and selection of equipment for video surveillance projects. Purchase of computer equipment.

- **Green dot, JSC**

January 2016 — June 2016 - Technical Support Engineer

– Configuring network equipment D-link, Alcatel, Cisco, Mikrotik. – Technical network management, network monitoring using Nagios, Zabbix. – Localization and elimination of network failures, restoration of functionality when network equipment
fails. -Assist in solving technical problems for users.

- **Kristall, MTU, JSC**

November 2011 — December 2015 - Technical Support Engineer

– Configuring network equipment – Huawei, Cisco, Telesyn, SNR. – Network monitoring using AGNEKO SNMPc, Cacti. – Acting as head of the technical support department during his absence. – Help in solving technical problems

- **Drozdoff, LLC**

July 2007 — December 2007 - System Administrator

Consultations on modernization, purchase, replacement of programs/components,
Organization of PC protection. Installation and configuration of various software. Diagnose and troubleshoot hardware, software and network problems. Maintenance of office equipment, maintenanceof workstations and servers

Образование

- **bachelor**

Ufa State Aviation Technical University
2014-2017

Обо мне

My experience in management: - Managed the testing process on a project and a testing team consisting of three testers (manual), onprojects to develop a web server application on a microservice architecture

- Supervised new testers on the project - Maintained various documentation
- Planned and supervised the implementation of testing work
- Developed a test model and testing strategy
- Involved in the selection of testing tools My technical experience and competencies: - Automation of web-UI testing
Stack: Kotlin, Junit, Selenium, Spring Data JPA, Allure
- Automation of REST-API testing
Technology stack: C#/net5.0, Nunit3, RestSharp Git as well as Postman + Newman
- Writing scripts for load testing and performing load testing
Stack: Jmeter, Grafana, Prometheus
- Managed the testing process on projects for more than 4 years
- I have experience in setting up CI/CD builds in the following Teamcity and Octopus Deploy
environments. A little bit of Jenkins, GitLab
- Test design. Developed test plans, checklists, testing reports
- Administered servers based on Debian, Ubuntu, CentOS, Astra
- Worked with various virtualization/containerization environments ProxmoxVE, VMWare vSphere, Workstation, Docker
- I have experience in setting up telecom equipment from Cisco, Huawei, D-link, Mikrotik. - I have experience in network
troubleshooting - tcpdump, Wireshark, Charles, Proxyman
- I have experience testing web, mobile and desktop applications
