## Навыки

Css/Sass, Express.js, FSD Architecture, JavaScript, MongoDB, Next.js, React Redux, React.js, REST, SOLID, Tailwind, TypeScript, webSocket.

## Опыт работы

- **"Coninfo" SRL**

  **nov 2021 - may 2022** - WEB Developer

  • I developed an API in PHP to link a MySQL database with an Oracle database using Oracle triggers and REST API. This automated the collection of user data, which improved the targeting of marketing campaigns and led to a 20% increase in sales.
  • I fixed bugs and refactored the code on the company's existing websites, resulting in a 40% improvement in page loading speed, which enhanced SEO performance and reduced the bounce rate for clients.

- **"WOX-STUDIO" SRL**

  **MAY 2022 - PRESENT** - Frontend React Developer

  • I've been working with: Javascript, Typescript, React.js / Next.js, Redux, Css/Sass, Tailwind, SOLID, Mongodb, express.
  • Developed two market-places on CMS Wordpress.
  • I developed ready-made modules for online stores to be reused in other projects within the company. This resulted in the creation of seven online stores, using React and reduced code duplication by 20% and increased the efficiency of new component development.
  • Developed an educational platform for language learning:
  • In this project, I built an interactive test and exam system from scratch, consisting of various types of questions and time limitations. At the end of the test, a certificate is issued.
  • I also developed personal accounts for users with the roles of student and teacher.
  • The platform includes functionality for students to sign up for online classes, track their progress, and view their achievements.
  • Teachers can create, edit, and delete courses and lessons divided into topics, as well as schedule online lessons.
  • Registration for the exam is also done through the personal account.
  • Additionally, a full-fledged forum was implemented where students can ask questions, and other users can respond to their posts.
  • In this project, I learned how to track and fix bugs, as well as collaborate efficiently with backend developers.
  • In addition to frontend development, I also had the chance to work on the backend. I'm familiar with MongoDB, Node.js, and Express, and I independently developed a small cryptocurrency exchange:
  • In this project, I worked with WebSocket. Using Binance's open API, I set up real-time cryptocurrency price updates directly from the real market and displayed them on the website.
  • Additionally, to enhance user convenience, I added a feature allowing users to scan their crypto wallet QR code through the camera, so they wouldn't have to manually input their long wallet address. This feature proved to be very helpful.

• I stored all user requests in MongoDB and added functionality for the admin to change the status of a request or delete it.
• I do code refactoring, optimize React component rendering with React.memo and useCallback. Frontend performance has increased by 50%, significantly improving the user experience.

## Образование

- **BUSINESS AND MANAGEMENT**

  Comrat State Univercity, Moldova
  2019 - 2022

## Обо мне

I am a Frontend developer focused on creating high-performance and scalable web applications using React.js and Next.js. I'm not afraid of challenges. I've built all my experience on solving business problems any way I can, not just learning theory. Teamwork and a serious approach to work are important to me. I would be glad to discuss the conditions!
